

Stand-Ups

- 1.) What was achieved last week?
 - Developed core modules from scratch (Student, Course, Teacher)
 - Completed the initial project push
 - Refactored and cleaned up the project structure
 - Delivered a fully functional API (without validations yet)
- 2.) What is the focus for today?
 - Continue improving the current implementation
 - Start adding validations to the API
- 3.) What blockers exist?
 - Need more knowledge and experience in implementing validations

Retrospective

- 1.) What went well? (Wins/Successes)
 - Successfully built the core modules from scratch
 - Achieved a clean and organized project structure
 - API is working as expected
- 2.) What didn't go well? (Problems/Challenges)
 - Validations are not yet implemented
 - Gaps in knowledge regarding validation techniques
- 3.) What should we start doing? (Improvements)
 - Focus on learning and implementing validations
 - Improve understanding of best practices while coding
- 4.) What should we stop doing? (Waste/Inefficiencies)
 - Delaying important features like validations
- 5.) What should we continue doing? (Best Practices)
 - Building modules from scratch
 - Keeping the codebase clean and organized
 - Maintaining a functional and stable API
